Can Help  
Recycle!*

## RECYCLING...

### Saves Energy

Making products from recycled materials uses less energy than making products from new materials.

### Reduces Pollution

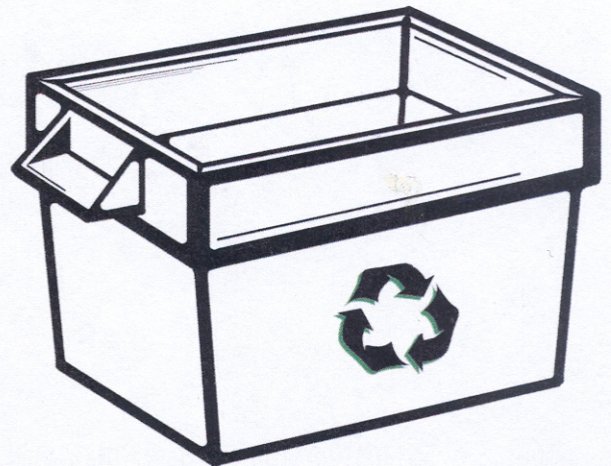

Manufacturing with recycled material is cleaner and less harmful.

### Conserves Natural Resources

Every ton of recycled paper produced saves about 17 trees and 7,000 gallons of water.

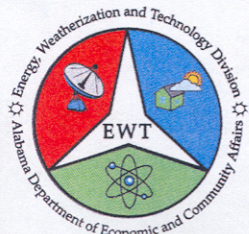

### Reduces the Amount of Waste Going into Landfills

When fewer materials are thrown away, the amount of waste that ends up in landfills is reduced.

You can help mom and dad separate recyclable items from your garbage at home. It's simple and makes a big impact on the future of our planet. In addition, you can help start a recycling program with your school. Look in the phone book or go to [www.earth911.org](http://www.earth911.org) to locate a recycling center near you.

**Remember, it all begins with YOU!**
